

Mr. Jon Baird

Jon Baird joined Weinstein & Harris early in January 2008 as Director of Research & Technology. Jon brings over a decade of information technology management and analysis experience to the organization. His duties include providing land research for the brokers, providing graphic and quantitative analysis of subject properties to support land broker operations, as well as the maintenance and expansion of the organization's technological capabilities.

Having spent 4 years as an analyst and manager for the United States Army, Mr. Baird brings the attention to detail and decision making tools that are required to maximize the procedural efficiencies involved with data collection and technology management. Mr. Baird spent his military service analyzing and managing both vector and raster data sets, intended for use in on-demand and relational database environments. This experience has a direct correlation with the data collection and presentation skills necessary to support the brokers of Weinstein & Harris with the best information available.

As an Arizona native and former analyst for the Arizona State Land Department, Mr. Baird has intimate familiarity with the regional real estate market. His experience working with the Land Department's information system departments has exposed Mr. Baird to the details involved with land management and property controls.

Contracting to the U.S. Department of Defense as a Program Manager, Mr. Baird led a team collecting, analyzing, and disseminating multiple data types, resulting in the implementation of multiple process improvement plans. The operating and data management procedures implemented by Mr. Baird were adopted as the Army-wide standard for installation management.

Mr. Baird is happily married to another Arizona native, Erin, and enjoys reading, writing, running, and his mixed-breed puppy, Roxy.
